

SwypeGloves

The World's Most Precise Touchscreen Gloves

Why Won't My Phone Work While I'm Wearing Gloves?

They Blinded Me, With Science!

Regardless of what people tell you, touchscreen devices are not controlled by pressure, the heat in your fingers, or by mysterious elves. Instead, the touchscreen reacts to the natural electricity in your skin. The rub is that when you put something non-conductive between you and your device (like gloves) the phone doesn't react and you're left to use your nose, face, or any other uncovered extremities to pick up that ringing phone. Yikes!

SwypeGloves - Like Magic In Your Fingertips

SwypeGloves have been specially designed to allow you to use your touchscreen smartphones, tablets, and other devices while wearing gloves, keeping your hands warm and toasty. We could bore you with the details, but instead, you can just rest assured that SwypeGloves use a unique technology (patent pending) to ensure the **most precise, 10-finger, touchscreen compatible gloves on the market today**. To see the gloves in action, checkout the SwypeGear channel on YouTube.

You've Got The Look

SwypeGloves are comprised of luxurious wool blend and are available in an unlimited combination of colors. Some of our most popular combinations can be seen on the left. The SwypeGear design team is constantly working to develop unique features such as dual-tone colors and contrast-color inner cuffs because your smart phone shouldn't be the only fashion statement you make.

Partners, Resellers, and Corporate Gifts

Interested in carrying the must-have phone accessory of 2011 and beyond? With minimum order quantities as low as 50 pairs, and custom color orders starting at 500 pairs, there's no reason to wait! Contact us or for more information today!
